

Alfa Laval Commissioning for Separators

Initial optimization for reliable performance

Your vessel's operation depends on new equipment performing as expected from the beginning. Commissioning by Alfa Laval protects your investment by making sure that your separator has a trouble-free start-up and achieves maximum uptime.

What we do

Following the installation of your high-speed separator, an experienced commissioning specialist from Alfa Laval makes sure the equipment performs according to design specifications. Our specialist ensures that the separation process will run under optimal conditions and that the separator is properly integrated into your existing processes and software systems. This optimization not only makes start-up as fast and as smooth as possible, but also reduces downtime and maintenance costs later on.

In addition, our specialist makes sure that operators completely understand the new separator. Your crew will learn how to operate the separator on a daily basis and how to conduct basic troubleshooting.

Benefits

- Smoother and faster start-up
- Safe operation by trained personnel
- Product and process awareness for crew
- Reduced total installation costs
- Lower maintenance costs in the future

Scope of service

Following installation, an experienced Alfa Laval specialist performs the commissioning process in seven phases:

1. Check of installation*
2. Start-up of equipment
3. Check of alarm
4. Check of safety functions
5. Test runs and performance checks
6. Crew training
7. Report

A follow-up review of equipment performance can be performed upon request.
